“Fast Transients with GROWTH-India Telescope”

- Led the Discovery of optical counterpart of GRB230812B using Zwicky Transient Facility.
- Led observations with GROWTH-India Telescope for the orphan afterglow candidate AT2023sva.
- Part of the Discovery team for “ZTF23aaooohpy/AT2023lcr”, fast fading transient.
- Part of the GROWTH-India Telescope team in searching Electromagnetic Counterparts to Gravitational Wave Events, in collaboration with the Zwicky Transient Facility team led by Caltech.
- Daily scanning for fast transients in ZTF data through ZTFrest.

“Thermonuclear bursts in Neutron Star Low Mass X-ray Binaries”

- Studying a sample of 15 thermonuclear X-ray Bursts from two transient Low Mass X-ray Binary sources 4U 1728–34 & 4U 1735–44 using *AstroSat* data.
- Developed pipelines for basic data reduction, time-resolved burst spectral analysis, and timing analysis for exploring accretion phenomena and rapid variability in lightcurves.

- Studied millisecond variability (Quasi Periodic Oscillations) in persistent emission from the accretion disk, and estimated spin period and magnetospheric radius.
- Performed Measurements for Photospheric radius, distance of the source and the spin frequency of the Neutron Star in the system, through thermonuclear bursts.
